

Installation Instruction

1. Select a flat, smooth, non-metallic surface that is at least one inch from any metallic objects, trim, or wires. The antenna can be horizontal or vertical, and out sight if desired.
2. Clean the surface thoroughly.
3. Peel off the Style 4353 antenna's paper backing a little at a time, rubbing the antenna smoothly onto the surface as you go. Be sure to press out any air bubbles, rubbing them to the sides of strips.
4. Attach the antenna's connector box to any convenient, smooth flat surface using the peel-off double stick pad.
5. Route the cable to your radio.
